DEVIATION REPORT — DEV-2026-014

Deviation ID	DEV-2026-014
Date Raised	14-Jan-2026
Raised By	Priya Nair, QC Analyst
Batch Reference	MP-PCM-2602 (Paracetamol Tablets IP 500 mg)
Equipment Reference	TCM-04 (Tablet Compression Machine)
Classification	Major
Related Deviation	DEV-2026-015 (TCM-04 calibration overdue) — identified as contributing cause

1. Description

During in-process quality control checks at the compression stage (Step 7, SOP-PRD-021) of Batch MP-PCM-2602, average tablet weight was recorded at 579 mg against a specification of 550 mg ± 5% (522.5-577.5 mg). 4 of 20 tablets sampled fell outside the individual weight variation limit of ±7.5%. Compression was stopped and the batch was placed on hold.

2. Immediate Action

Batch MP-PCM-2602 quarantined at the compression stage. Remaining in-process bulk retained under quarantine label. Production Head and QA Manager notified within 30 minutes per SOP-QA-014.

3. Investigation / Root Cause

Investigation per SOP-QA-014 traced the weight drift to progressive wear on the upper punch tooling set of TCM-04, resulting in inconsistent die-cavity fill during the compression run. Cross-reference to DEV-2026-015 showed that preventive maintenance and punch inspection for TCM-04 was overdue by 12 days at the time of the run, which is assessed as a contributing root cause. No raw material or granulation-stage non-conformance was identified.

CAPA Reference: CAPA-2026-011

#	CAPA Action	Target Date
1	Replace worn upper punch tooling set on TCM-04 and re-qualify machine settings before next batch	17-Jan-2026
2	Revise SOP-ENG-007 preventive maintenance frequency for TCM-04 punch inspection to 90 to 45 days	31-Jan-2026
3	Retrain compression-stage operators on early-warning weight-drift checks per SOP-PRD-021	05-Feb-2026

Closure

Batch MP-PCM-2602 disposition: rejected for the affected sub-lot compressed after the drift onset; remaining conforming sub-lot released separately after 100% weight-check screening. CAPA-2026-011 actions verified effective on the next 3 consecutive batches (MP-PCM-2603 through MP-PCM-2605), all within specification. Closed by: Dr. Sunil Mehta, Quality Head, 10-Feb-2026.
