Subject: Response to Internal Audit Observations and CAPA Status — Compression Area, Tablet Manufacturing Block A

Dear Sir/Madam,

This is with reference to the quarterly equipment compliance audit conducted at our Baddi facility in January 2026, during which an observation was raised regarding a lapse in the preventive maintenance schedule for a tablet compression machine (Equipment ID: TCM-04), and a related product quality deviation (DEV-2026-014) traced to the same root cause. We are submitting this letter to document our investigation, corrective and preventive actions, and current closure status for both linked events, in accordance with our Standard Operating Procedure for Handling of Out-of-Specification Results (SOP-QA-014).

1. Summary of Observations

- (a) DEV-2026-014: An in-process weight-variation deviation was identified in Batch MP-PCM-2602 (Paracetamol Tablets IP 500 mg) at the compression stage, traced to punch wear on Equipment TCM-04.
- (b) DEV-2026-015: Preventive maintenance and punch-wear inspection for TCM-04 was found to be overdue by 12 days at the time Batch MP-PCM-2602 was compressed.

2. Corrective and Preventive Actions Taken

Under CAPA-2026-011, the affected punch tooling set on TCM-04 was replaced and the machine re-qualified prior to resumption of production; the preventive maintenance frequency for punch inspection was revised from 90 to 45 days. Under CAPA-2026-012, an automated preventive maintenance and calibration due-date alerting system has been implemented across all Class-A production equipment at the facility, replacing the previous manual calendar-based tracking method.

3. Verification of Effectiveness

Effectiveness of the corrective actions was verified against the next three consecutive batches (MP-PCM-2603 through MP-PCM-2605) compressed on TCM-04, all of which met in-process weight and weight-variation specifications. No further preventive-maintenance schedule gaps were identified in a follow-up audit of remaining Class-A equipment.

4. Current Status

Both DEV-2026-014 and DEV-2026-015 are closed as of 03-Mar-2026. Supporting documentation, including the full deviation reports, CAPA records, and re-qualification data for TCM-04, is available for review upon request.

We remain committed to maintaining full compliance with applicable Good Manufacturing Practice requirements and welcome any further queries the Authority may have regarding this matter.

Yours faithfully,

Dr. Sunil Mehta

Quality Head
